**CLEAR-DIESEL® FUEL & TANK CLEANER**

**Technical Bulletin 9200**

---

**Benefits**

- Disperses diesel fuel contaminants
- Removes water and slime
- **+Petrofresh®** provides maximum long-term storage stability – keeps fuel fresh
- Prevents premature fuel-filter plugging
- Protects against fuel tank corrosion
- Effective in conjunction with **Bio Kleen® Diesel Fuel Biocide** to remove residual water and contaminants during microbial contamination clean-ups
- Effective in all diesel fuels, including Ultra Low Sulfur Diesel (ULSD), biodiesel and biodiesel blends

**Advanced Cleaning Technology**

Power Service® **Clear-Diesel Fuel & Tank Cleaner** is an advanced fuel tank cleaning technology that has been proven effective in hundreds of fleet, marine, construction and agricultural applications. **Clear-Diesel** can be used as a vital part of any preventive maintenance program or for immediate clean-up of equipment or fuel storage tanks.

**Provides Long-Term Fuel Stability**

Diesel fuel deteriorates when stored for more than 90 days. **+PetroFresh** keeps fuel residues dispersed and diesel fuel fresh when stored up to 12 months. Fuel tanks stay cleaner and fuel-filters last longer with **Clear-Diesel Fuel & Tank Cleaner**.

**DIRECTIONS FOR USING CLEAR-DIESEL FUEL & TANK CLEANER**

**To clean fuel tanks and prevent premature fuel-filter plugging:**

1. Pump or drain excess water and fuel contaminants from the bottom of fuel tank until diesel fuel appears. If your fuel tank does not have a bottom drain, see suggested pump-out procedure outlined on the back of this bulletin.

2. Determine the total capacity in gallons of the fuel tank to be treated. Using the table below, choose the **Clear-Diesel** container that will treat a fuel tank of that capacity.

3. Add **Clear-Diesel** to the fuel tank. Fill tank with fuel.

**To maintain a clean fuel tank and stabilize fuel for long-term storage:**

1. Determine the total capacity in gallons of the fuel tank to be treated. Using the table below, choose the **Clear-Diesel** container that will treat a fuel tank of that capacity.

2. Add **Clear-Diesel** to the fuel tank. Fill tank with fuel.
Pump-Out Procedure to Remove Water and Fuel Contaminants

If your fuel tank does not have a bottom drain, use the diagram and instructions below to build a pump-out system to remove water and fuel contaminants from the lowest point of the fuel tank.

![Diagram of pump-out system]

**Parts List for Do-It-Yourself Pump-Out**

- A fluid extraction pump (electric or manual) rated for use in diesel fuel
- One 2-foot section of clear, flexible braided tubing – diameter to match size of pump intake
- One 5-foot section of rigid PVC tubing to use as a probe – diameter to match clear flexible tubing

Access to the inside of fuel tanks can be accomplished through fuel fill orifices, fuel level/gauge sending units or fuel tank inspection plates.

Insert the rigid PVC tubing into the fuel tank until it makes contact with the bottom of the fuel tank. Initiate pump to begin pump-out. View water and other fuel tank contaminants through the clear plastic tubing. Stop pump-out when clean diesel fuel appears.

Discard tank bottoms in a method compliant with state and federal environmental regulations.
